## **1 INTRODUCTION**

---

Information and communication technologies (ICT) have become ubiquitous amongst government ministries and departments across the country. The increasing adoption and use of ICT has increased the attack surface and threat perception to government, due to lack of proper cyber security practices followed on the ground. In order to sensitize the government employees and contractual/outsourced resources and build awareness amongst them on what to do and what not to do from a cyber security perspective, these guidelines have been compiled. By following uniform cyber security guidelines in government offices across the country, the security posture of the government can be improved.
